How to read this guide

Configured means read from the live platform settings on 27 October 2026: commission rates and reward milestones. **EXAMPLE** means a hypothetical illustration using invented members and figures. Maturity amounts, commissions and rewards are configured amounts, not guarantees.

This document stays current

This guide is generated from the platform's configuration each time it is downloaded, so it reflects the rules, rates and milestones in force on the day you download it. The version code (2026.10.27-5e5d0e) changes whenever a stated figure changes.

Before you start

Investing involves risk, including the loss of the amount invested. Please read section 11, Risk Disclosure.

About Kuhim

What the platform is for, how the website is organised and how members find their way around it.

What this platform is

Kuhim is an online platform where registered members review investment plans, fund an account balance in USDT, buy plans and follow every investment from purchase to maturity. Around the plans it offers a **referral structure** with two incentive programmes, **Level Income** and **Business Rewards**, and a **member dashboard** that shows balances, investments and records.

Plan amounts, durations, maturity amounts and incentive rates are set by the operator and can change. This guide therefore explains the rules and shows the commission rates and reward milestones as configured on the date it was generated; the amounts and terms of each plan are always shown on the Investment page after you sign in.

- **Investment-plan interface:** members compare the available plans, see the principal, any fee and the configured maturity amount separately, then confirm.
- **Member dashboard:** one place for the Available Balance, investments, deposits, withdrawals, transfers, certificates and the referral programme.
- **Referral structure:** every member joins with the username of the member who invited them, which creates a permanent invitation chain.
- **Level Income:** commissions for eligible members when people in their invitation chain buy plans (section 05).
- **Business Rewards:** milestone rewards based on a member's Total Business, the plan purchases of the member and their team (section 06).

How the website is organised

Public pages are open to everyone. Members register with a referral username and then use the dashboard menu.

Public pages

Home, Plans, How it works, About & Investment Guide (this document), **FAQ, Contact**, and the legal pages: Terms and Conditions, Privacy Policy, Risk Disclosure and Responsible Investment Information.

Member menu (after you sign in)

Menu item	What you do there
Dashboard	See the account summary and recent activity.
Investment	Browse available plans, buy one, and follow My Investments through to maturity and collection.
Level Income	See the commission levels and the commissions credited to you.
Reward	See your Total Business and the Business Reward milestones.
Deposit / Withdraw	Add USDT to your balance, or request a USDT withdrawal.
Transfer	Send part of your Available Balance to another member by username.
Certificates	View and download a certificate for each of your investments.
Referral	Find your referral username and link, and see the members you referred.

Under your account menu you will also find Transactions, Security & Profile, PDF About Plan (this guide) and Audit (a record of your own actions).

Joining is by invitation

Accounts are invite-based. You register with the referral username of the member who invited you. Only the very first member joins without one.

Our Experience and Technology

The fields Kuhim works in, explained in plain language, with their limits stated honestly.

Our stated experience

Kuhim's own statement

Kuhim states that it has 20 years of experience in AI, cryptocurrency, trading and arbitrage. This is the operator's own statement. It has not been independently verified or audited, it does not say how long the platform itself has been operating, and it is not a record of investment performance.

Our focus is **technology**, **market research**, **analytical systems** and **risk awareness**: building a platform whose balances and dates are calculated and checked on the server, studying how markets and blockchains behave, and being clear about what can go wrong.

We do not claim licences, certifications, regulatory approvals, institutional partnerships, named founders or any verified trading track record, and nothing in this guide should be read as one.

The fields, in plain language

A simplified picture of an AI model: data goes in, layers of analysis weigh it, and a possible signal comes out.

Artificial intelligence (AI)

AI means computer systems that find patterns in large amounts of data, such as price histories and trading volumes, and turn them into forecasts or signals. Models learn from the past, so they can be wrong when markets behave differently. **AI does not remove financial risk and cannot reliably predict markets.**

Blockchain: transactions are grouped into blocks that are linked in order and shared by many computers.

Blockchain and cryptocurrency

A blockchain is a shared, append-only record of transactions kept by many computers. Cryptocurrencies are digital assets recorded on blockchains. **USDT** is a token designed to track the US dollar; deposits and withdrawals on this platform are made in USDT. Blockchain transfers are final: a payment sent to a wrong address usually cannot be recovered, and token prices and issuers carry their own risks.

Trading

Trading means buying and selling assets to try to profit from price changes. It can lose money, markets can move quickly, and past results do not guarantee future results.

Arbitrage: the idea is to use a price difference for the same asset in two markets.

Arbitrage

Arbitrage means taking advantage of a price difference for the same asset in different markets, buying where it is lower and selling where it is higher. In theory it can be low risk. In practice differences are often small and can disappear before a trade completes, and fees, delays and transfer times can turn an expected profit into a loss. **Arbitrage does not always produce a profit.**

How this connects to the plans

The maturity amounts in this guide are figures configured by the operator. This guide does not state that any plan's maturity amount is produced by AI, trading or arbitrage, and none of these fields can guarantee an outcome.

Investment Plans

What the plans are, how they are bought and where to find their current terms.

An investment plan is a product the operator offers for a fixed number of days. You choose a plan and one of its configured amounts, confirm, and the amount (the **principal**) is taken from your Available Balance. When the plan matures you collect it and the platform credits the configured **maturity amount**, less any fee, to your Available Balance.

Where the numbers are

This guide deliberately contains no plan amounts, maturity values or earnings figures, because they can change. After you sign in, the **Investment** page lists every plan that can be bought now with its principal, any fee, the maturity amount and the maturity date, before you confirm anything.

Plans on the platform today

Plan	Duration	Repeat purchases
Starter	5 days	Once per account
365-Day Plan	365 days	Allowed; each purchase is a separate investment
105-Day Plan	105 days	Allowed; each purchase is a separate investment

Read from the platform on 27 October 2026. Plans with no purchase amount switched on are not listed.

Rules that apply to every plan

- **Principal:** the amount you pay from your Available Balance when you confirm the purchase.
- **Maturity amount:** the amount the operator has configured for that plan and amount. It is set by the operator; it is not a promise and not a forecast.
- **Fee:** if one is configured for an amount, it is shown before you confirm and is taken from the maturity amount when you collect.
- **Fixed at purchase:** an investment keeps the terms it was bought under, even if the operator later changes the plan.
- **Confirmation check:** if the terms changed after you opened the page, the purchase is stopped so you can review again. Pressing the button twice cannot buy twice.

How Investment Maturity Works

From choosing a plan to collecting the result, in the order it happens on the platform.

Matured
Collect

The six steps of an investment.

- 1 **Select an available plan.** Only plans with purchase amounts switched on appear. Some plans, such as a one-time plan, can be bought only once per account.
- 2 **Review the configured amount and terms.** Principal, fees and the configured maturity amount are shown separately, and dates are calculated by the server, not by your browser.
- 3 **Confirm the investment.** The principal is taken from your Available Balance at once. If the terms changed after you opened the page, the purchase is stopped so you can review again, and pressing the button twice cannot buy twice.
- 4 **Track it from the dashboard.** My Investments lists every investment with its start date, maturity date and status; the countdown is informational only.
- 5 **Review its maturity date and status.** An investment is Active until its saved maturity date and Matured from that moment on.
- 6 **Collect it and check the records.** After maturity you collect it yourself. The platform then credits the principal and the earnings (the maturity amount minus any fee) to your Available Balance as separate ledger entries, visible under Transactions.

Collection is a step you take

Maturity is not paid out automatically. Nothing is added to your Available Balance until you collect a matured investment, and the maturity amount is a configured amount set by the operator, not a guaranteed return.

EXAMPLE: a timeline (no figures)

Day 0: a member confirms a plan and the principal leaves the Available Balance. From day 1 until the day before the maturity date, the investment is Active. On the maturity date it becomes Matured. The member then collects it: the principal and the configured earnings, less any fee, are credited to the Available Balance as separate entries. Nothing is credited before the member collects.

Each investment also has a certificate on the **Certificates** page.

Level Income

How referral-level commissions are earned, using the rates configured on the platform today.

The idea

Every member has a referral username. People who register with it are your **level 1** referrals, their referrals are your **level 2**, and so on down the invitation chain. When a member in your chain buys a plan, you can earn a commission on that purchase, with a percentage that depends on how many levels below you the buyer is.

The rates configured today

Level	Commission rate	Level	Commission rate
Level 1	20%	Level 11	0.25%
Level 2	8%	Level 12	0.25%
Level 3	4%	Level 13	0.25%
Level 4	2%	Level 14	0.1%
Level 5	1%	Level 15	0.1%
Level 6	1%	Level 16	0.1%
Level 7	0.5%	Level 17	0.1%
Level 8	0.5%	Level 18	0.1%
Level 9	0.5%	Level 19	0.1%
Level 10	0.5%	Level 20	0.1%

Configured commission rates on 27 October 2026. Total of all levels: 39.45%. A level shown as 0% pays nothing.

The rules the platform applies

- **Levels and rates:** 20 commission levels are configured, with the rates shown in the table below (all levels together add up to 39.45%; the platform never allows more than 100%).
- **What is paid on:** the **principal** of each real plan purchase (the amount invested), not on maturity amounts, earnings, deposits, transfers or withdrawals.
- **Amount:** principal x the percentage for that level, rounded down to the cent.
- **Eligibility:** the upline member's account must be Active and the member must already have **at least one real plan purchase of their own** made before the downline purchase. Each upline is checked on their own. Nothing is paid retroactively.

- **Crediting:** a commission is credited at the moment of the downline purchase, directly to the upline's Available Balance, as a "Level N commission" ledger entry. It counts under Total Commission on the dashboard. It is not paid at maturity.
- **One payment per purchase and member:** a purchase can pay each eligible upline only once.
- **Administrators** are outside the invitation structure: levels stop at an administrator account.
- **Business volume** (Total Business) is a separate measure: see section 06.

A simple example

Example only: hypothetical members

Each eligible upline is paid once, at the moment the downline purchase is made.

EXAMPLE: hypothetical members and a hypothetical purchase.

EXAMPLE (hypothetical figures)

Imagine a member, "the buyer", buys a plan with a principal of \$100.00. Using the configured rates: the buyer's level 1 upline receives 20% = \$20.00; the buyer's level 2 upline receives 8% = \$8.00; the buyer's level 3 upline receives 4% = \$4.00. Each of those uplines receives the commission only if they were eligible at that moment (Active, with a real plan purchase of their own made earlier). An upline who is not eligible receives nothing for that purchase.

Commissions are not guaranteed income

Level Income depends on other people choosing to join and to invest, on your own eligibility, and on the rates the operator has configured, which can change. Do not rely on commissions as income.

Business Rewards

Total Business, the reward milestones configured today and how an eligible reward is credited.

The first milestones, as configured. Higher milestones are listed in the table below.

Total Business

Total Business = your own real plan purchases + the real plan purchases of your downline members, down to 20 levels.

- **What counts:** the **principal** paid for real plan purchases. Your own purchases always count; your team's count down to the configured depth.
- **Counted once:** each purchase is counted once for each member whose business it belongs to.
- **What does not count:** deposits, transfers, withdrawals, commissions, rewards and registrations.
- **Status does not matter:** a purchase that has matured, been collected, or whose plan is later switched off still counts, because the volume is the principal that was paid.
- **It is a measure of volume, not money.** Total Business is not a balance and cannot be withdrawn.

Milestone rewards

- A **milestone** is reached when your Total Business is at least its target.
- Each milestone pays its reward **once per member**. It is credited directly to the Available Balance as a "Business reward" ledger entry and counted in your earnings records.
- Milestones are checked after each plan purchase for the buyer and for their eligible uplines within the configured depth. An upline needs an Active account and a real plan purchase of their own.
- A milestone that has been reached stays reached, even if volume numbers change later.

Total Business reaches	Reward	Total Business reaches	Reward
\$550.00	\$16.00	\$1,100,000.00	\$22,000.00
\$2,600.00	\$60.00	\$2,800,000.00	\$45,000.00
\$10,500.00	\$200.00	\$5,500,000.00	\$120,000.00
\$52,000.00	\$900.00	\$11,000,000.00	\$240,000.00
\$130,000.00	\$2,200.00	\$26,000,000.00	\$720,000.00
\$260,000.00	\$4,500.00	\$60,000,000.00	\$1,200,000.00

Configured milestones on 27 October 2026.

EXAMPLE (hypothetical member)

A member's own plan purchases total \$275.00 and their team's purchases total \$275.00. Total Business becomes \$550.00, which reaches the first milestone, so a reward of \$16.00 is credited once. Later, when Total Business reaches \$2,600.00, the next milestone pays \$60.00. Rewards depend on eligibility and the rules above, and are not guaranteed.

Referral System

Username, invitations and how referral relationships connect to the incentive programmes.

How an invitation chain grows.

Referral usernames

Every member can choose a unique username under **Security & Profile**. The **Referral** page shows it together with a ready-made invitation link of the form <https://kuhim.com/register?ref=YOURUSERNAME>.

Registering with a referral username

- On the registration page a new member enters the **referral username** of the member who invited them, or opens that member's invitation link, which fills it in.
- The platform checks that the username exists. A member cannot refer themselves. Only the first member of the platform joins without one.
- The result is a permanent record of who invited whom. It decides the levels used by Level Income and Total Business.

What members see

The **Referral** page lists the members you referred directly and shows your referral username. The dashboard tile **Total Referrals** counts your direct referrals only. It is a count of relationships, not an amount of money.

How referrals connect to incentives

A referral relationship does not pay anything by itself. Level Income and Business Rewards can apply to the people in your invitation chain, subject to the eligibility rules and the rates configured at the time (sections 05 and 06). This guide shows no real member names, usernames, wallet addresses or balances.

Member Dashboard

What each figure on the dashboard means, and what is and is not money you can use.

Member Dashboard: account summary (labels as shown on the website)

The eight summary tiles of the Member Dashboard, with their labels as shown on the website.

Tile	What it shows	Is it spendable?
Available Balance	The sum of all your ledger entries: verified deposits, collected maturities, commissions and rewards, less purchases, transfers and withdrawals you requested.	Yes. The only balance you can use or withdraw.
Total Earned	The earnings credited when you collected matured investments (the maturity amount less principal, after fees). Commissions and rewards are not included.	Already inside the Available Balance.
Total Business	The principal of real plan purchases by you and your team, down to the configured depth.	No. Volume, not cash.
Total Investment	The principal of all your real plan purchases.	No. It is what you paid in.
Active Plan	How many of your investments have not yet been collected.	A count, not money.
Total Commission	Level Income credited to you so far.	Already inside the Available Balance.
Total Deposit	Verified deposits credited to your account (in USD).	Already inside the Available Balance, less what you spent.
Total Referrals	Members who registered with your username.	A count, not money.

Four things that are easy to confuse

Term	In one sentence	Can it be withdrawn?
Available balance	Money in your account that you can invest, transfer or withdraw.	Yes (see section 09).
Investment principal	The amount you paid into plans. It returns to the Available Balance when you collect a matured investment.	Not until collected.
Commission earnings	Level Income credited to you when eligible people in your chain buy plans.	Yes, once credited.
Business volume	The total principal of purchases by you and your team, used to measure reward milestones.	No. It is not money.

Business volume is not withdrawable money

Total Business only measures volume. It never appears in the Available Balance and cannot be withdrawn. Only a reward that has actually been credited to the Available Balance can be used.

Deposits and Withdrawals

How USDT gets into and out of an account, and the checks on the way.

Deposits

The deposit journey in five steps.

Deposits are made in USDT on: **BNB Smart Chain (BEP-20)**, 15 confirmations required. Only networks the operator has switched on appear on the Deposit page.

- 1 Request an exact amount.** You choose the network and an amount. The platform offers a few exact amounts and reserves the one you select for 24 hours; a tiny unique difference lets the platform recognise your payment.
- 2 Send exactly that amount of USDT** to the receiving address shown on the Deposit page, using the official USDT token on the chosen network. Always copy the address from the page, never from a message or from this document.
- 3 Submit the transaction ID**, and optionally a screenshot.
- 4 Verification.** The platform checks on the blockchain that the transfer is the right token, to the right address, for the exact reserved amount, with the required confirmations. When the operator has switched on automatic crediting, an exact match is credited automatically. Otherwise, or if anything does not match, the deposit waits for an administrator's review.
- 5 Credit.** A verified deposit is added to your Available Balance with a ledger entry (1 verified USDT = \$1.00).

Mistakes can be permanent

A different amount, a different token or a different network may not be credited and can be unrecoverable. Blockchain transfers cannot be reversed.

Withdrawals

A withdrawal request is held first and paid only after review.

Withdrawals are requested in USDT on BNB Smart Chain. Current settings: a minimum of **\$10.00** and **no withdrawal fee**.

- 1 **Withdrawal Address (once):** open **Withdrawal Address** from the dashboard, choose an enabled network, enter your USDT wallet address, review it and save it with your password. The Withdraw page then uses it; you do not type it for every withdrawal and only a shortened form is shown on screen.
- 2 **Request:** choose the amount. The platform takes the destination from your saved address on the server, checks the address again and checks that your Available Balance covers the amount. The address is copied onto the request, so changing your saved address later never changes a request you already made.
- 3 **Hold:** the amount leaves your Available Balance immediately and is recorded as a hold, so it cannot be spent twice. You can have only a limited number of open withdrawal requests at once.
- 4 **Review:** an administrator reviews the request and, if approved, sends the USDT and records the blockchain transaction hash. A withdrawal shows **Completed** only after the payment has been recorded.
- 5 **Rejected or failed:** the held amount is returned to your Available Balance, once, with a ledger entry.
- 6 **Statuses you may see:** Pending, Approved, Completed, Rejected and Failed.

Payouts are made by the operator

This guide describes withdrawals as reviewed and paid by the operator, who records each payment. It does not describe automatic payouts, because they are not part of the standard process.

Protect yourself

Double-check the address and network before you confirm: a payment to a wrong address cannot be undone. Keep your password private, sign out on shared devices, and never share a recovery phrase or private key with anyone, including support.

Platform Security and Transparency

The safeguards that are implemented in the platform today, and what we do not claim.

Accounts

Passwords are hashed; sessions use secure cookies; sign-in is rate limited

Server-side rules

Balances, dates and limits are checked on the server, never in the browser

Immutable ledger

Every balance change is a permanent ledger entry; entries cannot be edited

Audit trail

Sensitive actions are logged; administrators confirm with their password

Reconciliation

Wallet totals can be checked against the ledger

Five layers of safeguards that exist in the platform.

- **Account access:** passwords are stored hashed, never in plain text. Sessions use secure, HTTP-only cookies. Sign-in, registration, transfers, deposits and withdrawals are rate limited. Suspended accounts cannot use the platform.
- **Server-side rules:** every page and action re-checks your session and role on the server. Members only ever see their own records, and the administration area is for administrator accounts only.
- **Transaction records:** each balance change is a ledger entry that records what happened. You can follow yours under Transactions and Audit.
- **Financial auditability:** ledger entries cannot be edited or deleted. Corrections are added as new compensating entries. Administrators can reconcile wallet totals against the ledger. Sensitive administrator actions require the administrator's password again and are written to an audit log.
- **Duplicate protection:** repeating a click or a request cannot buy a plan twice, submit a transfer twice or request the same withdrawal twice.
- **Deposit safeguards:** deposits are matched to the official USDT contract, the receiving address and the exact amount, and an address that is a token contract or a burn address cannot be saved as the receiving wallet.
- **Withdrawal address:** where a withdrawal is sent is chosen on the server from your saved address. Saving or changing it needs your password again and an explicit confirmation, it is recorded in your audit log, it is shown only in a shortened form, and it cannot move money by itself. The format and checksum are checked, and the zero address, burn addresses and USDT contract addresses are refused. A correct format does not prove that a wallet is yours: check it yourself.

What we do not claim

This guide does not claim any independent security audit, regulatory approval, licence, insurance, guarantee of funds or security certification. None has been verified, so none is stated.

Your own habits matter too: use a strong, unique password, keep your devices updated, and be wary of anyone who contacts you asking for your password or codes.

Risk Disclosure

Please read this section carefully before you invest anything.

You can lose some or all of the money you invest

Cryptocurrency and trading-related activities involve substantial risk. Configured figures such as maturity amounts, commission rates and reward milestones are not guarantees and are not forecasts. Actual outcomes may be very different, including a total loss of the amount invested.

- **Configured figures.** Maturity amounts are set by the operator. They are not guaranteed, not forecasts and not evidence of future performance. Projected figures must never be treated as assured returns.
- **Commissions and rewards are not guaranteed income.** They depend on other people joining and investing, on your eligibility and on rates the operator can change. Be cautious of any scheme whose rewards depend mainly on recruiting others.
- **Digital assets.** USDT and other digital assets can lose value or their peg, can be sent to the wrong address irreversibly, and may be restricted or regulated in your country.
- **High stated returns.** Unusually high or fixed returns are a recognised warning sign. Understand how any return is produced and who is responsible for paying it before you invest.
- **Platform and operational risk.** Systems can fail, rules and plans can change, and withdrawals depend on review and payment by the operator. Existing investments keep the terms they were bought under.
- **No advice.** Nothing here is investment, legal or tax advice or a recommendation. Speak to a licensed financial adviser, check what your national regulator says, and invest only what you can afford to lose.

Frequently Asked Questions

Short answers that follow how the platform actually works.

Where can I see the plans and their amounts?

On the Investment page after you sign in. It shows each plan that can be bought now with its principal, any fee, the maturity amount and the maturity date before you confirm. This guide contains no plan amounts because they can change.

Are the maturity amounts guaranteed?

No. They are configured by the operator and are not guarantees or forecasts. Investing carries risk, including the loss of the amount invested.

When does an investment mature, and is it paid automatically?

It matures on the date saved when you bought it. Maturity is not paid automatically: you collect it from My Investments, and the principal and earnings (less any fee) are then credited to your Available Balance.

Can I buy the same plan again?

Plans can be bought again unless a plan is marked as a one-time plan, which can be bought once per account. The Investment page shows which applies.

How do I deposit?

Open Deposit, choose the network and an exact amount, send exactly that USDT amount to the address shown, and submit the transaction ID. It is credited to your Available Balance once verified.

How do withdrawals work?

You save your withdrawal address once, then request a withdrawal amount. The amount is held, an administrator reviews it and pays it, and the payment is recorded. If it is rejected or fails, the held amount returns to your Available Balance.

What is the Available Balance?

The money in your account that you can invest, transfer or withdraw. Principal in active investments, and business volume, are not part of it.

How does Level Income work?

When people in your invitation chain buy plans, eligible members within the configured levels earn a percentage of the purchase principal (20 levels are configured). You must be Active and already hold a real plan purchase of your own. Commissions are credited at the moment of the purchase.

How do Business Rewards work?

When your Total Business (your purchases plus your team's, down to the configured depth) reaches a milestone, its reward is credited once to your Available Balance, if you are eligible.

Is Total Business money I can withdraw?

No. It measures purchase volume. Only credited rewards, commissions, earnings and deposits are in your Available Balance.

Do I need a referral username to register?

Yes. Accounts are by invitation, so you enter the username of the member who invited you. Only the first member joined without one.

How is my account kept secure?

Passwords are hashed, sessions use secure cookies, sensitive checks happen on the server and every balance change is an immutable ledger entry. Keep your password private and never share a recovery phrase or private key.

Who do I contact for help?

Use the Contact page of the website.

Contact and Final Notes

Where to get help, and the fine print.

Contact

Support contact details are published on the **Contact** page of the website.

Website: <https://kuhim.com>

Stay safe

Never send passwords, one-time codes, recovery phrases or private keys to anyone, by email or message. Support will never ask for them.

Disclaimer

This document is general information about the Kuhim platform. It is not an offer, not a solicitation and not investment, legal or tax advice. It describes the configuration and rules of the platform on 27 October 2026 (version 2026.10.27-5e5d0e); plans, amounts, rates and rules can change, and the latest information on the website prevails. Maturity amounts, commissions and rewards are configured amounts, are not guarantees, and may not be achieved. Investing carries risk, including the loss of the amount invested.

This guide makes no claim of regulatory approval, licence, audit, insurance or guaranteed funds.

Kuhim

Technology. Transparency. Risk awareness.
